

FRESH AIR

START OF HEALTHY LIFE

HEALTHY LIFE

PROTECT HEALTH AND IMPROVE BREATHING

<p>MAKES GOOD CARE OF CHILDREN</p> <p>Children has low immunity and susceptible to bacterial& virus invasion, needs to purify the environment for them.</p>	<p>PROTECTS PREGNANT WOMAN</p> <p>Improve the quality of breathing for expectant mother and reduce air pollution to baby's development, ensure the health and safety.</p>
<p>IMPROVES RESPIRATORY DISEASE</p> <p>Purify the air for patients with asthma, rhinitis and filtering the allergens like dust and pollen</p>	<p>KILLS BACTERIA AND VIRUS</p> <p>Floating viruses are easy to cause disease.</p>
<p>ELIMINATES SECOND HAND SMOKE</p> <p>Effectively on smoke flavor removal, and reducing the harm of secondhand smoke.</p>	<p>REDUCES PM2.5</p> <p>Rapidly remove the inhalable lung particles to improve air quality.</p>
<p>REDUCE FORMALDEHYDE, BENZENE</p> <p>Remove the harmful gas like formaldehyde, Benzene efficiently</p>	<p>REMOVES TAIL GAS</p> <p>A lot of tail gas produced while car is running.</p>

ULTRASTRONG PURIFICATION GREAT SATISFACTION

Advanced purification technology

Easy plug and play system

Anion Releasing

Efficient and low noise

360°inlet purifying

360°INLET PURIFYING

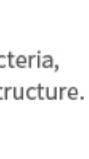

CAR AIR PURIFIER

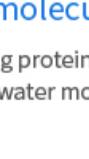

Releasing of Anions

Remove PM2.5

Ultra quiet operation

HEPA filtering

Release large amount of anion into the air by the ion discharge technology

Take effect to the surface of bacteria, decompose and recombine its structure.

Decomposing protein to form oxygen rich water molecules.

1 HEPA FILTER

HEPA High precision cycle purification.

Filtering particulate pollutants as small as 0.3 micron such as pollen, bacteria and viruses.

The filtration rate for particulate pollutants with 0.1micron to 0.3 micron reach 99%. Effective removal of pollutants like smoke, dust, odors and bacteria.

2 ANION RELEASE

Releasing of Anions

Anion concentration:5 million/cm²

Release large amount of negative anions, anion is the oxygen molecules combined with an outer layer and become negatively-charged which has strong adhesion ability. The indoor floating dust, smoke, germs, viruses are have positive charge and can be gathered together by anions, anions make them loose the ability to float freely in the air and then sink to the ground, in this way air can be purified and no longer be harmful to human body. The ultrafine particles are difficult to be removed by common equipment, while the anion have strong ability to capture these harmful substances. The smaller the particle size, the higher the capture rate.

Anion Generator

Decompose Bacteria

Produce Oxygen rich water molecule

Release large amount of anion into the air by the ion discharge technology

Take effect to the surface of bacteria, decompose and recombine its structure.

Decomposing protein to form oxygen rich water molecules.
